PROFESSIONAL SUMMARY

Information Technology graduate with practical experience in mainframe development and full-stack web programming. Built secure web applications using customized server logic to resolve practical business requirements. Experience in writing standard COBOL programs for z/OS environment.

SKILLS

- **Languages:** Java, COBOL, JavaScript, TypeScript, HTML, CSS, SQL, PostgreSQL, JCL
- **Frameworks:** Spring Boot, ReactJS, NextJS, ExpressJS, TailwindCSS, NodeJS
- **Other:** Git/GitHub, REST API, Docker, Vercel, Render, z/OS, ISPF, Prisma, Agile

EXPERIENCE

Land Bank of the Philippines (HO)

COBOL Developer Intern

February 2026 – April 2026

Malate, Manila, Philippines

- Developed and migrated 13 COBOL programs to z/OS mainframe computing environment to increase data processing speed
- Worked with PS and VSAM input files to handle data reading, validation, and processing logic
- Executed JCL job submissions and monitored execution status to maintain system reliability
- Performed unit testing and ensured the programs complied with IBM z/OS coding standards to ensure seamless enterprise integration

Bulacan State University

Institutional Student Assistant

January 2025 – May 2025

Malolos, Bulacan, Philippines

- Managed front desk operations and document handling, ensuring efficient communication between university offices while maintaining high service standards for student inquiries
- Provided technical consultation to faculty on emerging software tools and performed diagnostic troubleshooting to maintain hardware system availability.

PROJECTS

STC Performing Arts Center Website

June 2025 – December 2025

- Integrated PayMongo API to automate payment processing and secure transactions
- Developed a dynamic administrative dashboard using TanStack Start and Supabase for real-time facility management
- Created an automated booking system that synchronizes class availability and coach schedules across the platform

BulSU OSAS Complaint and Grievance Portal

January 2025 – September 2025

- Developed secure server-side logic APIs to manage sensitive data fetching and student records
- Built a customized grievance workflow to automate Bulacan State University protocols and ensure strict procedural compliance
- Designed the landing page and user interface using React.js to improve student engagement
- Created a real time tracking system for administrators to monitor, categorize, and resolve student concerns

QuickRoute Web

April 2026 – June 2026

- Developed a Spring Boot mock server backend that converts JSON definitions into live REST endpoints, enabling frontend teams to test against realistic API responses before the real backend exists
- Built configurable response delays, HTTP status codes and path variable substitution, giving full control to simulate real-world conditions like loading states and error handling

CERTIFICATES

- Java Developer, *DataCamp* June 2026
- IBM z/OS Mainframe Practitioner, *IBM* June 2026
- IBM Mainframe Developer, *IBM* March 2026

EDUCATION

Bulacan State University Malolos, BSIT

August 2022 – June 2026
